Renown Institute for Robotic Surgery

**GYNECOLOGIC ONCOLOGY**

Renown is a designated training center for da Vinci gynecologic cancer surgery. If you’ve been diagnosed with gynecologic cancer, this minimally invasive approach might be an option for you.

A wide variety of gynecologic cancers can affect a woman’s reproductive system, including of the uterus, vagina, ovaries and fallopian tubes. The most common types of gynecologic cancers are cervical, endometrial (uterine) and ovarian cancer.

**For most patients, da Vinci Surgery offers potential benefits over open surgery, including:**

- Significantly less pain
- Shorter hospital stay
- Quicker recovery
- Less blood loss
- Precise removal of cancerous tissue (two year follow-up)
- Smaller incisions for minimal scarring

These benefits are why da Vinci Surgery is the number one surgical treatment option for women facing gynecologic cancer. If you have been diagnosed with endometriosis, fibroids, heavy menstrual bleeding, pelvic prolapse or gynecologic cancer, your doctor may recommend a hysterectomy. If so, ask about minimally invasive da Vinci Surgery.

Using the da Vinci System, your doctor operates through a few small incisions. This system features a magnified 3D HD vision system and special instruments that bend and rotate far greater than the human wrist. These features enable your surgeon to operate with enhanced vision, precision, dexterity and control.

**For more information call 775-982-4900 or visit renown.org/daVinci**

The following surgeon is trained in da Vinci Robotic Surgery for Gynecologic Oncology and credentialed to perform procedures at Renown Medical Center:

**Peter Lim, MD, FAOCG**
